

## ZerOS Software Release (Public Release)

Released Version:	7.8.1	Release Date:	19 <sup>th</sup> March 2014
Previous Version:	7.8.0	Release Date:	6 <sup>th</sup> March 2014

## ZerOS 7.8.1 Software Release

Release 7.8.1 of ZerOS is a minor new software release recommended for all consoles and servers running the ZerOS Operating System (listed below). These release notes describe the new features and bug fixes that have been implemented between versions 7.8.0 and 7.8.1.

## Products Affected

✓ SCD Server & SCD Server Pro

## Compatibility

No compatibility issues known from 7.8.0

## Update Instructions

Please carefully follow the update instructions available at the end of this document.

The software installation process completely removes all data on both the console and the USB memory stick. If the current show file is still required, it must be saved and stored somewhere other than the console or USB memory stick being used to perform the software update.

When performing a software update it is important to ensure that the power supply to your desk is stable and reliable. Power loss during a software update can render your desk unusable.

If you are in doubt on any of the instructions below please contact your Zero 88 dealer or Zero 88 directly.

## Bug Fixes

**ZOS-5704**      SCD Server sees Solution Playback Master fader at 0%

## Known Issues

After running the USB Installer, Microsoft Windows 7 might prompt that "This program might not have installed correctly". Users should click "This program installed correctly" to close this window.

## Software Update Instructions

### Introduction

When performing a software update it is important to ensure that the power supply to your desk is stable and reliable. Power loss during a software update can render your desk unusable.

Software downloaded from the Zero 88 website needs to be unzipped first in order to perform the updates. If you experience problems using the built-in zip functions of Microsoft Windows, then try Winzip ([www.winzip.com](http://www.winzip.com)).

Instructions must be followed accurately and in order. Deviations or omissions could render the desk unusable and require it to be returned to the factory for recovery. If any difficulties are encountered at any point, then do not proceed any further with the update, and contact Zero 88 for assistance.

If you are in doubt on any of the instructions below please contact your Zero 88 dealer or Zero 88 directly.

Once all the software is up to date, you can get on with enjoying the new features in the desk software. Zero 88 recommend printing these Release Notes and having them with you when operating the desk, as some functionality may have changed which is explained in these notes.

**The update process will wipe the desk including any current show files so please ensure that backups are taken before proceeding with the update.** After completing the update you may re-load your show if required.

### Installing the software (USB)

To perform the update, you will need a USB Memory Stick, which will be erased and formatted as part of the process. Make sure you first backup any data on the USB Memory Stick that you wish to keep.

Some types of USB Memory Stick may not be bootable by the desk. If you experience any difficulties then try using the Zero 88 USB Memory Stick supplied with the desk. The update will reinstall all the software on the desk. An .exe file (USB Install Creator application) is run on a Windows PC to create a bootable USB Memory Stick.

Download the USB Install Creator application from the Zero 88 website (<http://www.zero88.com/software/zeros>) and, after unzipping, run it. Insert a USB Memory Stick into your Windows PC when prompted and follow the on screen instructions of the USB Install Creator. After a few minutes, the install creator will

instruct you to remove the USB Memory Stick, which now contains the update for the desk.

Remove the USB Memory Stick from your PC and insert it in one of the desks USB ports. Power on the desk and the desk will automatically boot into the software update application. It is recommended that you have a monitor, keyboard and mouse connected to the desk to perform this update. Press the [Install ZerOS] button on the monitor and the software will be installed.

Once the update is complete, you can remove the USB Memory Stick and reboot the desk. At this point your desk contains the latest software.
